PROGRAMMING IN JAVA LAB-2

//
PRN-21070126005

NAME- AAYUSH RAJPUT

BATCH-AIML A1

Program Description: Part1: Write a Java program that declares two arrays named ‘even’ and ‘odd’. Accept numbers from the user and move them to respective arrays depending on whether they are even or odd.
Part2: Implement a java function that finds 2 neighbouring numbers in an array with the smallest distance to each. The function should return the index of the 1st number.
Part 3: Write a Java program to convert an array into ArrayList and vice versa.

//

// Create a Java Program that takes accepts numbers from users and stores them in two different arrays, odd and even.

CODE:

```
import java.util.*;
import java.util.Scanner;

class Smallest_distance
{
    static void smallest_distance()
    {
        int[] arr = new int[10];
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter 10 numbers: ");
        for (int i = 0; i < 10; i++) {
            arr[i] = sc.nextInt();
        }
        int min = Integer.MAX_VALUE;
        int minI=0,minJ=0;
        for (int i = 0; i < 9; i++) {
            int diff = arr[i+1] - arr[i];
            if(diff < min){
                min = diff;
                minI = i;
                minJ = i+1;
            }
        }
        System.out.println("The smallest distance is between " + arr[minI]
+ " and " + arr[minJ]+ " and the distance is " + min);
        sc.close();
    }
}

class Array_List{
    static void arraylist()
    {
        int[] array = new int[10];
```

```
        Scanner sc = new Scanner(System.in);
        System.out.println("Enter 10 numbers: ");
        for(int l = 0; l < 10; l++)
        {
            int n = sc.nextInt();
            array[l] = n;
        }

        ArrayList<Integer> list = new ArrayList<Integer>();
        for(int l = 0; l < 10; l++){
            list.add(array[l]);
        }
        System.out.println(list);
        sc.close();
    }
}

public class ArrayEvenOdd
{
    public static void main(String[] args) {

        System.out.println("1. Smallest distance between two numbers in an
array");
        System.out.println("2. Array to ArrayList");
        System.out.println("3. Even and Odd numbers");
        System.out.println("Enter your choice: ");
        Scanner sc1 = new Scanner(System.in);
        int choice = sc1.nextInt();
        switch(choice)
        {
            case 1:
                Smallest_distance.smallest_distance();
                break;
            case 2:
                Array_List.arraylist();
                break;
            case 3:
                // Create two arrays odd and even
                int[] odd = new int[10];
                int[] even = new int[10];

                Scanner sc = new Scanner(System.in);
                System.out.print("Enter numbers to classify, enter 'end' to
stop: ");
                while(true)
                {
                    String input = sc.nextLine();
                    if(input.equals("end"))
                    {
                        break;
                    }
                    else
                    {
                        int num = Integer.parseInt(input);
                        if(num%2 == 0)
                        {
                            for(int i=0; i<even.length; i++)
